

# **INTRODUCTION TO PROGRAMMING**

# WHAT IS PROGRAMMING?

*Writing human "readable" text that is transformed into a series of commands a computer can understand*

What kind of tasks would make good a candidate for a program?

- Repeatable tasks
- Manual tasks with risks of human error
- Pulling together lots of data from a wide range of sources

What kind of tasks would not make a good candidate for a program?

- Making decisions
- Applying context to a situation
- Recognising images
- All of these are changing as innovations in machine learning are being made

# WHO IS THIS?

|                   |     |
|-------------------|-----|
| Blue              | 97% |
| Facial Expression | 93% |
| Fashion Accessory | 90% |
| Smile             | 85% |
| Headgear          | 83% |
| Headpiece         | 75% |
| Fun               | 73% |
| Hat               | 70% |

# WHAT IS THE 200TH DIGIT OF PI ?

Command Prompt - dotnet run

```
Digit 76: 2
Digit 77: 0
Digit 78: 8
Digit 79: 9
Digit 80: 9
Digit 81: 8
Digit 82: 6
Digit 83: 2
Digit 84: 8
Digit 85: 0
Digit 86: 3
Digit 87: 4
Digit 88: 8
Digit 89: 2
Digit 90: 5
Digit 91: 3
Digit 92: 4
Digit 93: 2
Digit 94: 1
Digit 95: 1
Digit 96: 7
Digit 97: 0
Digit 98: 6
Digit 99: 7
Digit 100: 9
Digit 101: 8
Digit 102: 2
Digit 103: 1
Digit 104: 4
```

# WHAT IS PROGRAMMING? (UPDATED)

*"Humans and computers using their strengths together to accomplish tasks"*

Computers are very literal

### Windows

A fatal exception 0E has occurred at 0028:C562F1B7 in VXD ctpci9x(05)  
+ 00001853. The current application will be terminated.

- \* Press any key to terminate the current application.
- \* Press CTRL+ALT+DEL again to restart your computer. You will lose any unsaved information in all applications.

Press any key to continue \_

# UNDERSTANDING PSEUDOCODE

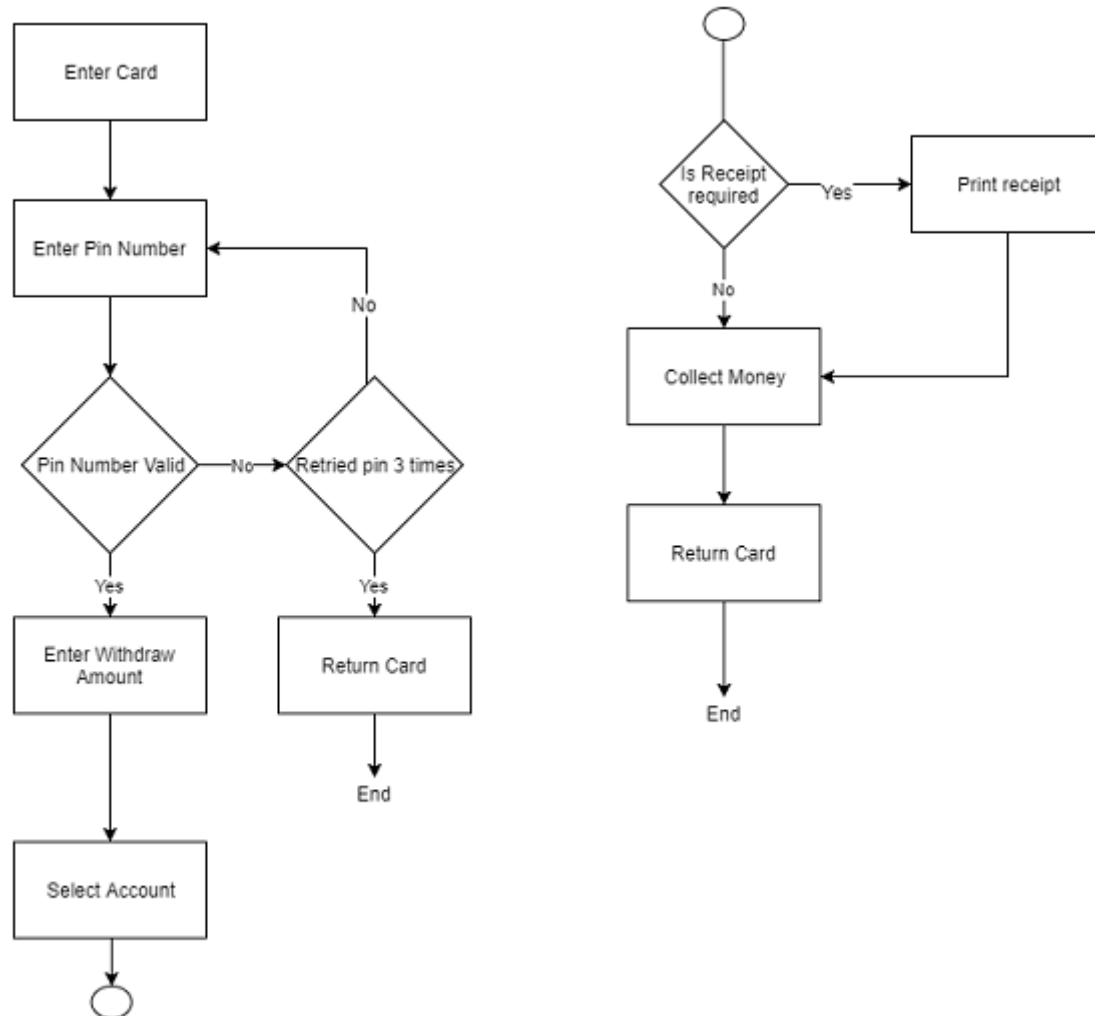

- Planning technique to write out a programs logic
- Language agnostic
- Great tool for collaborating

# PSEUDOCODE TECHNIQUES

A simple list

1. Boil water in kettle
2. Put tea bag in cup
3. Wait for water to boil
4. Add boiled water to cup
5. Add sugar
6. Add milk
7. Serve

# Flow Chart

# Flow Chart Key

An action performed by the program

A decision required to progress through the program

Connector symbol to show continuation of flow chart between pages

Indicated a loop process is occurring

End

Symbolises the program has reached the end of its function and can terminate

# Pseudocode

```
PROGRAM PrintSumOf1To5
    Total = 0;
    A = 1;
    WHILE (A <= 5)
        DO    Total = Total + A;
            A = A + 1;
        ENDWHILE
    Print Total;
END
```

# PSEUDOCODE EXERCISE

In pairs, choose one of the pseudocode methods we have discussed to detail the steps in going through the checkout of a grocery store.

# VARIABLES

- A value that is stored and accessible from within an application
- Every variable is given a name, which can be used to reference the value throughout a program

# EXAMPLE OF DECLARING A VARIABLE

```
var x = "hello there!"
```

- **var** - Is a keyword that tells javascript you are declaring a variable
- **x** - Is the name of the variable
- **=** - Operator that tells javascript the value of the variable
- **"hello there!"** - The value of the variable to be stored. In this case, a string

# VARIABLE TYPES

| Name    | Example            | Description   |
|---------|--------------------|---|
| String  | "Hey there!"       | A series of characters surrounded by quotation marks                  |
| Number  | 26                 | Any number between $-2^{53}$ and $2^{53}$                             |
| Boolean | True/False         | A computer science concept of a value that either be true or false    |
| Array   | ["Hello", 2, true] | An ordered collection of data, can either be a primitive or an object |

# ASSIGNING VARIABLES

```
var x = "hello there!" // Declares a string variable  
var y = 26 // Declares a number variable  
var z = true // Declares a boolean variable  
var xy = ["hello there!", 26, true]; // Declares an array
```
